In a world where technology is moving faster than most laws, lawyers cannot ignore AI, cybersecurity, data privacy and digital business models anymore. Tech Law Winter School 2026 is meant to help you build that edge in a clear, practical way.

Over two weeks, from 21 January to 3 February 2026, this fully online Winter School blends live theory lessons with hands on drafting. The aim is simple: to show you how tech law works in real life, not just on paper.

Across 10 expert led modules, you will study high demand areas like data protection, AI liability, blockchain contracts, cyber incident response and IP strategy in the digital space. You will not only learn the law but also apply it through practical tasks such as drafting cyber cell complaints, privacy policies, smart contract clauses and legal opinions. The idea is to mirror real business workflows so you feel closer to actual practice.

What makes this school stand out is the faculty. Sessions are led by practitioners who work on these problems every now and then. Their inputs help you connect classroom ideas with real-world expectations and client work.

You also get live interactive sessions, Q&A in each lesson, access to session recordings for later revision, and a resource toolkit with templates and checklists. By the end, you walk away with not just an understanding of tech law, but also business ready documents and skills. A certificate of completion adds credibility to your academic and business image.

Whether you are just curious about tech law, want to build a new skill set, or simply want to keep up with how law is changing in the digital age, this Winter School gives you an organized way to move forward with confidence.

Why Attend

Learn the core areas of digital law

Understand how AI, cybersecurity, data privacy and emerging tech laws show up in real issues and day to day work.

Work on actual drafting

Each session includes short, focused drafting tasks based on issues widely seen by law firms and in house teams.

Understand dangers and compliance

See how businesses handle privacy obligations, cyber incidents, data governance and regulatory requirements in India and abroad.

Look beyond buzzwords

Build a grounded understanding of what actually counts in tech law practice, rather than just following trends or jargon.

Program Details

The Winter School is open to:

Students

Young workers

In house teams

Researchers

Anyone interested in the growing field of tech law

Duration: 2 weeks

Dates: 21 January 2026 – 3 February 2026 Format: Online (theory + practical drafting sessions)
